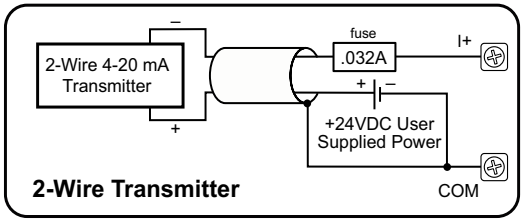
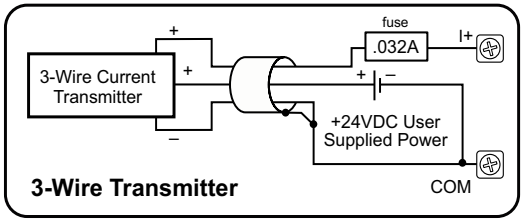
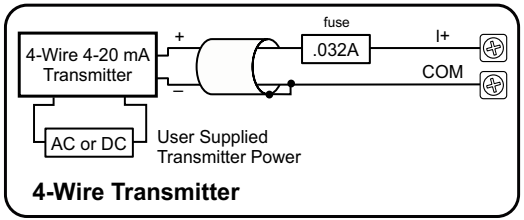
Current Input Circuits

An Edison S500-32-R 0.032A fast-acting fuse is recommended for current loops.



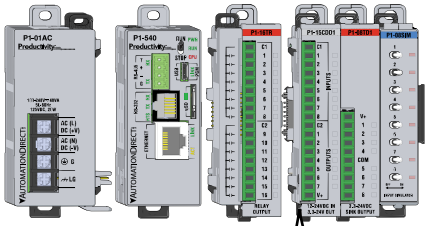




Module Installation

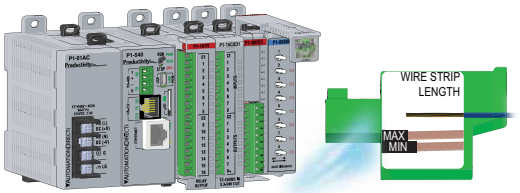
WARNING: Do not add or remove modules with field power applied.

Step One: With latch in "locked" position, align connectors on the side of each module and stack by pressing together. Click indicates lock is engaged.



Ensure all latches are secure after modules are connected.

Step Two: Attach field wiring using the removable terminal block or ***ZIP***Link wiring system.



Step Three: To unstack modules, pull locking latch up into the unlocked position and then pull modules apart.

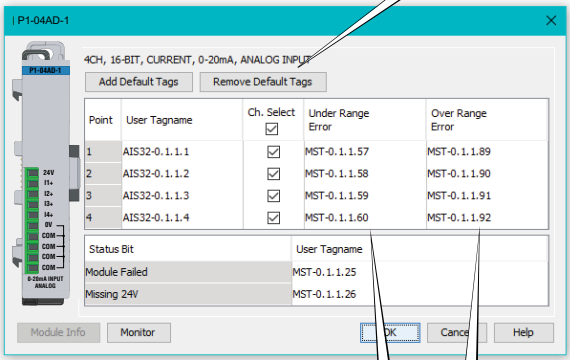
Using the Hardware Configuration tool in the Productivity Suite programming software, drag and drop the P1-04AD-1 module into the configuration.

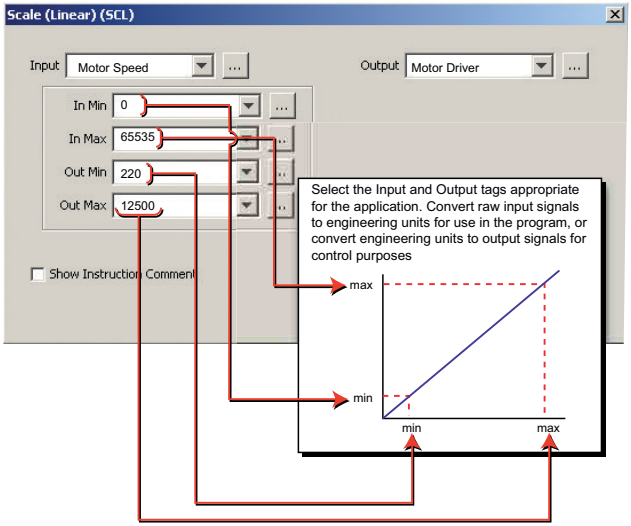


The "Under Range Error" bit for each channel activates for a signal around 0mA ± offset error.
The "Over Range Error" bit for each channel activates for a signal around 19.999 mA ± gain error.

Linear Scaling

The Scale (Linear) function can be used to:

- Convert an application specific range to range which is native to the analog output module.
- Make other linear conversions in ranges appropriate to the application.



Non-Linear Scaling

The Scale (Non-Linear) function can be used for Non-Linear applications.
